

Matched population moments do not determine the score

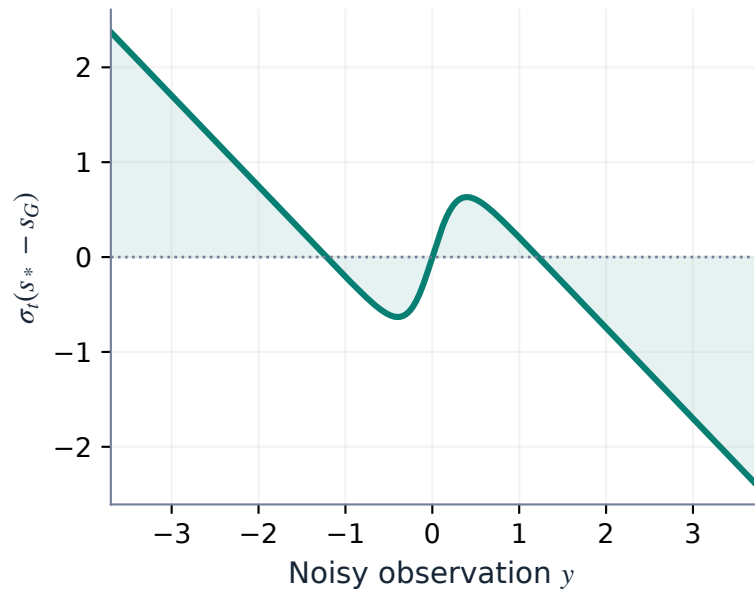

Same mean and variance

Different exact scores

Oracle residual remains

Clean GMM: $\frac{1}{2}\mathcal{N}(-\rho, 1 - \rho^2) + \frac{1}{2}\mathcal{N}(\rho, 1 - \rho^2)$; reference: $\mathcal{N}(0, 1)$; $\rho = 0.92$, $\sigma_t = 0.35$. All curves are analytic; no network is trained.
